Every Child Every Chance Every Day

The Nectar Room Project – What is it ?

You may have seen the workmen and diggers digging up the back of the school field recently and wondered what they were up too. Pelsall Village School has a new and exciting project to share with you it's called The Nectar Room Project.

There will be a new exciting adventure walkway with a huge beautiful blooming wildflower meadow in the center. It will attract all different kinds of wildlife including bumble bees and butterflies of many different species.

You will be able to go and explore with your classmates and report back on what wildlife you can see.

The Idea

Stage 1 - Wildflower Pathway

The idea is to encourage more nature and wildlife into the grounds of Pelsall Village School. The wildflower meadow will help attract many wildlife and the looped walkway is a way you can enjoy exploring the outside world.

Stage 2 - Outdoor Classroom

We are also creating a new outdoor classroom with a bird hide looking over the woodland with picnic tables and fruit trees surrounding the outdoor classroom.

Djogs

Introduction

Djogs is a local family run business who specialize in Landscape Architecture.

Landscape Architects decide what goes into a garden for a park or a school. They also help other businesses plan the landscape around their buildings and what it will look like.

A landscape architect needs to know a lot about plants. Plants have different needs so some require a lot of sun, and some require a lot of water. They also need to know how big plants will grow too.

Danielle Jeynes is a landscape architect and the owner of Djogs and has designed and sponsored The Nectar Room Project especially for you to enjoy.

Day 1 and 2 -

On the first day the diggers had to remove the grass and rich top-soil from where the wildflower meadow will be sown as this soil is too rich in nutrients for the wildflowers to grow without being outgrown by the grass.

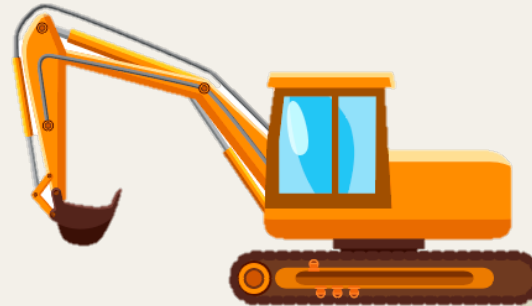

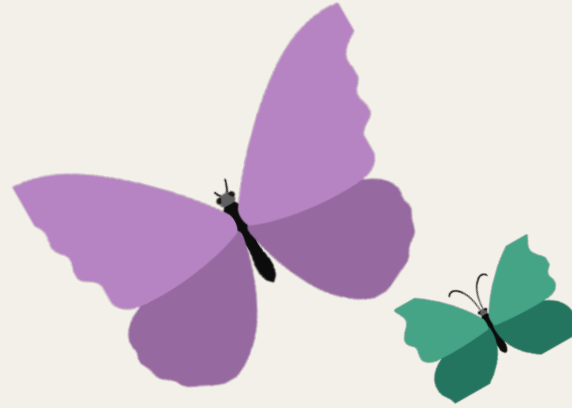

On the second day two huge trucks made their way onto the school playground to deliver the foot path material for the loop walkway.

Day 3 to 6 -

The workmen were working really hard to shape the pathways and make some butterfly banks.

They also put the material down for the paths and prepared the soil ready for the seed sowing of the wildflower meadow.

Seed Sowing -

Here are some pictures of some children from Pelsall Village School who very kindly helped and got involved in the seed sowing for the wildflower meadow.

The wildflowers provides seeds, nectar, pollen and leaves a good source of food, especially for pollinators such as bees. The wildflower meadow will look very beautiful too! We can't wait to see the first flowers appear in the summer.

Time Capsule

A time capsule is a memory box that holds present day items, such as photos, newspapers, letters, pictures and more.

It is then buried or hidden away for the future. In a few years you can open it back up at see what items you have put in.

Djogs would love you to create some letters which can be put in your very own Pelsall Village School Time Capsule and then bury it in the Nectar Garden.

Maybe you can even add a covid mask and talk about the pandemic or you can write a letter all about yourself and what you enjoy about Pelsall Village School or even write a short story about what the present world is like today.

Let your imagination run wild!

Don't forget to put your **Name, Age** and **Date** on your letter.
